

Alcohol contains a lot of kilojoules so it can easily contribute to weight gain. Like sugar, alcohol has 'empty kilojoules' because it contains few nutrients for the body to use.

Also when you drink alcohol, you become less aware of the food you are eating and can easily overeat.

Current Australian Guidelines recommend **no more than two standard drinks per day for women and for men.** In addition to one or two alcohol free days per week.

A FEW THINGS TO NOTE

- A standard drink contains 10 grams of pure alcohol
- Alcohol products must display the number of standard drinks they hold
- There are no common glass sizes used in Australia.
- Drink serving sizes – glasses, bottles, cans – are often more than one standard drink.
